

`glm::eulerAngleYZ`

`glm::eulerAngleZY`

`glm::eulerAngleY`

```
graph LR; A[glm::eulerAngleYZ] --> C[glm::eulerAngleY]; B[glm::eulerAngleZY] --> C;
```

The diagram illustrates a relationship between three functions from the glm library. On the left, two white rectangular boxes are stacked vertically. The top box contains the text `glm::eulerAngleYZ` and the bottom box contains `glm::eulerAngleZY`. On the right, there is a single gray rectangular box containing the text `glm::eulerAngleY`. Two blue arrows originate from the right side of the left boxes and point towards the left side of the gray box, indicating that both `glm::eulerAngleYZ` and `glm::eulerAngleZY` map to or are equivalent to `glm::eulerAngleY`.
